KYOCERA
SecureAudit

HAVE YOU SECURED
YOUR PRINT ENVIRONMENT?

CHECK YOUR KYOCERA MULTIFUNCTIONAL DEVICE IS CONFIGURED TO MEET YOUR SECURITY POLICIES

With a greater risk from security threats and a need for data compliance, checking the security of MFPs has become a high priority for organisations. KYOCERA have developed a solution that provides a one stop security check of your device. Printer security audit capabilities are now in your control, giving you ongoing reporting to show compliance and highlight gaps to be actioned, giving you peace of mind.

KYOCERA SecureAudit provides a simple method for users to check: all open ports, protocols, registered accounts, job boxes, installed apps and USB status on your HyPAS™ enabled/capable devices. From this information the data manager can make an informed decision on what areas of the network are potentially vulnerable to a breach and why.
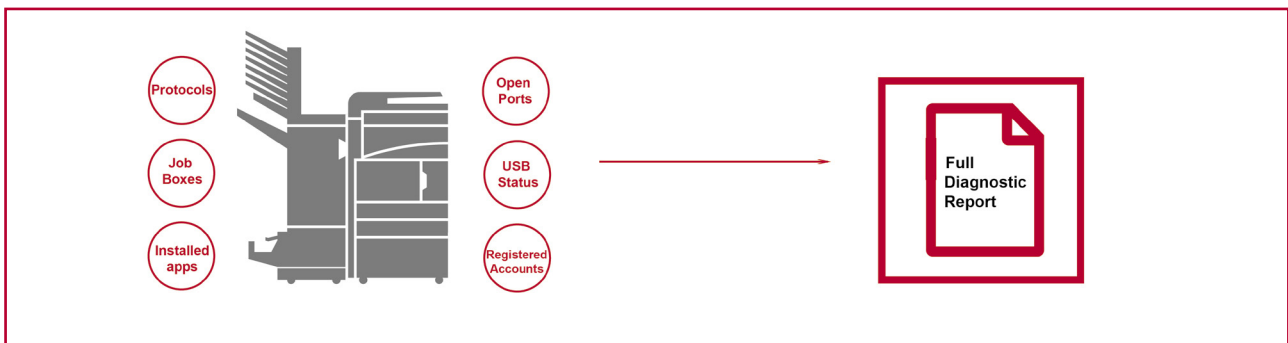

BUSINESS CHALLENGES

> New General Data Protection Regulations (GDPR) require personal data to be secure for an organisation to comply with legislation.

> More complex cyber threats to my organisations networks.

> No visibility of current security level of MFPs.

> The process to check MFPs across a variety of settings takes a substantial amount of time as well as requiring technical knowledge of the devices and what to report against.

YOUR ADVANTAGES WITH KYOCERA SecureAudit

> KYOCERA SecureAudit will give your organisation the ability to see what vulnerabilities may be on your devices whilst at the same time providing information about the device's status across a number of settings via diagnostic reports.

> KYOCERA SecureAudit works in conjunction with organisations security strategies to support data protection regulation and security audit compliance.

> KYOCERA SecureAudit has a quick install time with an intuitive interface and unambiguous report generation so no prior technical training is required.

HYPAS™ – TAILOR-MAKE YOUR MFP TO SUIT YOUR BUSINESS

HyPAS™

HyPAS™ is KYOCERA's platform to develop custom business applications. These can run embedded inside the device and extend the device functionality according to user needs. For powerful functionality, applications can connect to external server applications and integrate the device into company workflows. With HyPAS™, we can meet individual customer requirements and provide the right solution for your business.

FEATURES & SPECIFICATIONS

KYOCERA SecureAudit runs a diagnostic report on: all open ports, protocols, registered accounts, job boxes, installed apps and USB status on the device. All information is then compiled into one report which can then be printed or saved to USB in a JSON format for review. From this, the security administrator can make informed decisions on where the points of vulnerability are. The report also provides key information used to build a data security strategy by giving visibility of the current default settings.

Print full diagnostic report: customise what settings you want to be reported on and have a full breakdown printed or saved to USB within moments of running the application.

User-friendly: step-by-step screens make it easy for users to produce in-depth reports with minimal training needed.

Security: by identifying where vulnerabilities may exist, this compliments a preventative security strategy looking to find and fix possible breach points before they happen.

Data Protection Regulations:
KYOCERA SecureAudit will support data protection policies and assist GDPR compliance.
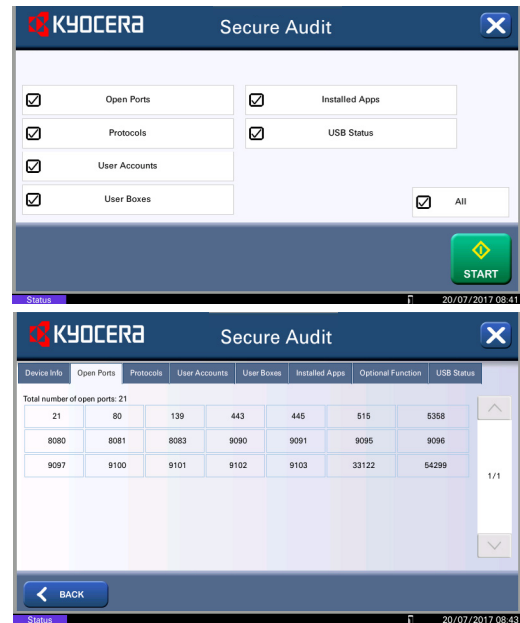

VISIBILITY LEADS TO SECURITY

KYOCERA SecureAudit is not focused on encryption or firewall defence (although we do have complimentary products that can provide on those fronts). The focus of KYOCERA SecureAudit is to give businesses and organisations visibility of their current KYOCERA fleet and understand what settings are currently in place that may be a point of entry to be exploited or compromised. This gives IT staff custom diagnostic reports that can be used to justify further security measures to keep data safe.

You cannot solve a problem until you have identified what it is!

SUPPORTED SYSTEMS

Compatible with all HyPAS™-enabled MFPs

Compatible with all HyPAS™-capable MFPs

Note that HyPAS™-capable devices require a compatible external memory card.

COMPLIMENTARY INFORMATION:
KYOCERA Data Security Kits provides data encryption that meets ISO criteria for KYOCERA devices, for further information use the link below:
